Rehab Car Seat HERO

...flexible, comfortable and secure!

The HERO-NXT child seat is a for the disability field modified car seat from RÖMER-BRITAX. It is qualified for being installed in most of the customary vehicles which provide an ISOFIX anchorage system. The car seat is designed to be used in the backseat of a car and does not have to be buckled on with the belt which enable a simplified use.

The HERO-NXT is equipped with a 5-point seatbelt who gently protect your child. The quick-release fastener supports a handy and fast transfer.

The internal padding, developed and manufactured by HERNIK, provides especially small children with an optimal positioning and can be complemented with an additional abduction block or side supports.

The HERO-NXT enables a safe rearward and forward facing travelling position. Due to the weaker neck musculature of children younger than 15 months, the rearward position of the HERO is highly recommended. This setting can be used for children with a body weight up to 18 kg (39lbs). With a body weight of 9 kg (20 lbs) or higher it can be also used in the forward facing travelling position.

4

To support children with limited trunk control, the seat angle is adjustable. This enables to switch between an active and a passive seating position.

security tray

Stepping in and out requires a lot of effort from parents of hypotonic children. For an easier transfer, the HERO-NXT can be rotated 90° which enables to place the child without overstaining the back. Also, the fastening is much more easy in that position. Afterwards you just rotate the HERO-NXT into the preferred position.

Is the seat to be used in several vehicles, it can be removed and installed in seconds as it is not fixed with the cars seatbelts but with the ISOFIX connectors who enable a secure position.

- 1** ...in the direction of travel; Back height adjustable
- 2** ...swiveling: 90°, 180° oder 360°
- 3** ... against the direction of travel
- 4** ...HERO-NXT with abduction block and side supports

... versatile, like the needs of their child

The rehabilitation-modified HERO-NXT car seat features adjustable and individually positionable aluminum chest pads that control the lateral movement of the child - just as the mother's hands would. Optionally, the following accessories are available to ensure comfortable and safe transport in the car:

- abduction block
- side supports
- security tray

These options allow individual needs of the single child to be taken into account, especially as no accessory excludes another. Many modern vehicles are equipped with ISOFIX, which is the prerequisite for the HERO-NXT to fix it in the car. The application of the vehicle belts is eliminated. An important innovation is the 5-point harness, which can be tightened with one movement and makes everyday life a lot easier.

As we continue to evolve the HERO-NXT, we are pleased to receive suggestions and suggestions!
