# child car seat **KIDSflex**

## ... a car seat for children with special needs

The KIDSflex child seat is a restraining car seat for physically and / or mentally disabled children. It is qualified for being installed in most of the customary vehicles. The car seat is designed to be used in the backseat of a car and requires a 3-point safety belt.

The seat can be placed behind the passenger seat or behind the driver seat if the belt is converted accordingly. Additi-onal to the cars seat belt, the KIDSflex comes with a 5-point seat belt who gently protect your child.

clamp strap

ISOFIX-adapter

The adjustable seat depth as well as the variable belt route in the backrest offer plenty possibilities to adapt the seat to to the growth of the child. The needed individual aids for your child can be selected from the abundant accessories.

Even if the three different sizes of the KIDSflex do not match the stature of your child, we offer a flexible solution for this: we customize the needed dimensions individually!

A popular feature is the innovative **swivel** which simplifies the transfer of the child even though it is gaining weight. The pivot point was moved from the center to a rear and outer position. This enables the seat to move away from the car seats backrest during the rotation and simultaneously towards the doorway. During the development, great emphasis was placed on a compact design, so the total height does not increase!

The body part that moves the most during a crash is the head. For this reason, the headrest "Kick-Back" was developed. Thanks to the patented predetermined bending points the kinetic energy of the head can be absorbed and avoids dangerous injuries.

KIDSflex in size 2, black/red including u-shaped headrest, lateral supports, shoulder supports, leg supports, abduction block, seat angular adjustment and swivel

2

KIDSflex in size 2, black/blue including u-shaped headrest, lateral supports and swivel

3

variable, arrestable back angular adjustment (default feature)

4

variable seat depth adjustment (range of 6cm, default feature)

## ...multifarious, like your child's necessities

The KIDSflex is a child seat especially modified for children on rehabilitation and contains adaptable and individually positionable lateral supports to control the child's lateral movement. Optional accessories are available to ensure a comfortable and secure journey in the car:

- Angular adjustment
- Swivel
- Leg supports
- ISOFIX- connector
- Impact pads and security tray
- Abduction block
- Foot rest
- Variety of headrests
- Trunk supports
- Shoulder supports
- Security pad for the buckle

By means of those accessories the individual needs of the child can be addressed, especially as the options are not mutually exclusive. Many modern vehicles are equipped with ISOFIX for which we provide suitable adapter units to install the seat perfect in the car.

An important development is the 5-point seat belt. As it can be tightened with only one move, it simplifies the daily life enormously.

central quick lock for 5-point harness
